

SOQ 2023 – WORKS

WORKS: Lift Stations

Firm to demonstrate experience in the preparation of design reports technical memorandums, plans and specifications including bid period services, and engineering services during construction (ESDC) for mechanical water, wastewater, or industrial infrastructure. Design may include new or rehabilitation, retrofit, modification, or replacement of existing mechanical facilities such as pumps, blowers, trash racks, solids dewatering equipment and other mechanical systems and conveyor systems. Specific services may involve the review or design of plans to modernize mechanical systems, the evaluation or review of circuits and piping for pumps, and the performance of existing equipment.

Bid period assistance includes providing responses to bidder's questions and preparation of addenda as necessary. ESDC includes, but is not limited to, submittal review, contract interpretation and clarification, field and progress meeting participation, as-built drawing preparation, start-up coordination and project commissioning activities.
